Data Technician/Scientist
Remote Paid Business Internships/Part-Time Jobs with Land One Inc.

Summary

Land One Inc. is a land investment company associated with Demeter Capital. The market for land is being driven by new technologies that enable residential development in rural areas. Examples:

-Off-grid solar systems are becoming cost competitive with grid power.
-SpaceX's Starlink service delivers broadband internet to rural America.
-Modular construction tech from companies such as Mighty Buildings, Boxabl, and Cover.
-Autonomous vehicles will reduce the hassle associated with driving distance between population centers and rural areas.

We are seeking students interested in remote work on part-time basis. **Hours are flexible and can easily accommodate a class schedule.** Work would begin immediately or can be scheduled for a particular time of year.

We will train you to identify attractive rural land markets and to correctly price vacant parcels in those areas. The results of your work will enable us to scale our offer program.

Compensation will vary based upon the student's ability and credentials. The student's location is not important. Projects will be performed remotely with regular communication via Skype. For those who excel, fulltime employment offers may be extended.

Applicants

Applicants should be proficient in Microsoft Excel. All majors are encouraged to apply. Majors in GIS, computer science, architecture, residential or civil engineering, and other disciplines related to data science or real estate are a plus. All applicants should embody the following characteristics:

-Ambitious and interested in long-term career success
-Comfortable learning new disciplines independently
-Hardworking, honest, and sincere
-Willing to communicate and ask for help

Applicants should apply via Handshake or email their CVs to matt@land.one. Interviews will test basic competency in Excel while guiding interviewees through an example with real data.
